

FFP Tech Tip: Data Count

From the main tool bar Click Weather->Climatology

On the Climatology Options screen, click the Data Count check box.

Click Run. The report will tally the number of days in each period for each year, and then display the total number of years and individual observations for each period. Periods without observations are blank.

Tip: Setting the analysis period to 10 days or monthly makes it easy to identify periods with less than the full amount of data in a shorter report. Also, just select just one variable.

```
FireFamily Plus Data Count Report
printed on: 11/06/2008 at 02:11:55 PM (from run # 1)
using database: C:\Program Files\FireFamilyPlus 4\ffplus4
```

```
-----
Active Working Set:
Station: 101028 - MOOSE CREEK
Data years: 1996 - 2008
Analysis Period Length: 10 days
Annual filter dates: January 1 thru December 31
-----
```

```
Station Details:
101028 MOOSE CREEK Fuel model: H (Use 88?: N)
-----
```

Variable: Dry Bulb Temperature
